DETAILED ACTION

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the present invention is allowable for at least the following reasons where the prior art of record fails to teach a control valve arrangement for use in controlling fuel pressure within a control chamber of a fuel injector that controls the movement of an injector valve needle near an injector valve seat when a portion of the needle is exposed to fuel pressure during use within the control chamber and the control valve is displaceable in a first and second position where the control valve interacts with a first seat so that the control chamber and the high pressure fuel communicate and prevents communication between the control chamber and a fuel drain while the needle is abutted with the needle seat and in the second position the control valve engages the second seat so that the control chamber communicates with the fuel drain and communication is prevented between the control chamber and the high pressure fuel so that the needle displaces away from the needle seat and the second seat has a surface of a bore provided in the valve housing within the control valve where a restricted flow path restricts the rate of fuel that flows from the control chamber to the fuel drain and the control valve is moved from the first to second position to reduce the speed at which the injector needle lifts from the needle seat and also restricts the rate at which fuel flows from the high pressure fuel source to the first position to force the needle to abut the needle seat while reducing the

loss of high pressure fuel to the fuel drain and the restricted flow path has a passage that is located between the first seat and the second seat and is defined by an outer surface of the control valve and the bore in the valve housing.

The prior art of record also fails to teach in combination where the restricted flow path is arranged to have the rate of fuel that comes out of the control chamber to the drain to be low and keep the fuel flow rate into the control chamber to be high so as to provide asymmetric operation of the control valve while also having speed control of the needle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Terminal Disclaimer

The terminal disclaimer filed on 06/30/2010 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent No. 6,889,918 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Response to Arguments

Double Patenting Rejection

Applicant's arguments, see the properly filed terminal disclaimer, filed 06/30/2010, with respect to the rejection of Claims 1, 3, 5, 10, 12, 17 and 19 have been fully considered and are persuasive. The rejection of Claims 1, 3, 5, 10, 12, 17 and 19 held under grounds of non-statutory obviousness-type double patenting has been withdrawn in view of the properly filed terminal disclaimer on 06/30/2010 (approved 07/06/2010) and prevents improper timewise extension of patents rights past U.S. Patent No. 6,889,918 which is commonly owned and assigned.

Allowable Subject Matter

Claims 1, 3, 5, 10, 12, 17 and 19 are allowed over the prior art.
